QuEChERS Kit

High-Quality Solutions for Efficient Sample Preparation

Efficiency
Versatility
High Purity Materials

Quick, Easy, Cheap, Effective, Rugged, and Safe.

GL Sciences, with a legacy spanning over half a century since its founding in 1968, is proud to present its new InertSep QuEChERS Kit.

Our extensive experience in manufacturing high-quality chromatography products ensures that this kit meets the highest standards of purity and performance.

Key Features:

High-Purity Materials: The SPE material "InertSep" is designed to maximize the performance of chromatography and mass spectrometry.

Compatibility: Complies with international standards such as AOAC and EN protocols, ensuring consistent results.

Original 2003 Method:

Analysis of pesticide residues

A simple and effective protocol for extracting various compounds in one step.

AOAC 2007.01 Method:

Analysis of acidic or basic compounds

A variation optimized for acidic pesticides, involving pH adjustments and the addition of specific buffering agents (buffers).

EN 15662 Method:

Analysis of pesticide residues in food within Europe

A European standard based on QuEChERS, focused on plant-based foods, using acetonitrile extraction and dSPE for clean-up.

NY/T 1380-2007 Method:

Analysis of pesticide residues in food in China

A Chinese agricultural standard based on QuEChERS, designed for multi-class pesticide residue analysis, with acetonitrile extraction and dSPE.

User-Friendly: Clear instructions and easy-to-use components make it accessible for both novice and experienced users.

The solid-phase extraction (SPE) cleanup step in the QuEChERS method is critical for effectively removing impurities from samples. It can efficiently eliminate impurities such as organic acids, sugars, fatty acids, pigments, chlorophyll, and carotenoids from food samples, thereby enhancing the accuracy and reliability of the subsequent analyses using LC/MS or GC/MS.

Pesticides with triazole, triazine, or pyrimidine groups are known to have polar characteristics, making them prone to adsorption on the silanol groups of solid-phase extraction bulk materials, which can result in poor recovery rates. The material used in GL Sciences' QuEChERS Kit exhibits high inertness, reducing secondary adsorption effects and thereby enhancing the reliability of the analyses of these pesticides.

Cyproconazole

Hexaconazole

Difenoconazole

Extraction Kit

Cat.No.	Descriptions	Kit	Qty	Method
5010-10000	6 g MgSO ₄ , 1.5 g NaOAc with 50 mL Centrifuge Tube	Tube & packet	50/pk	AOAC 2007.01
5010-10001	6 g MgSO ₄ , 1.5 g NaOAc	packet	50/pk	AOAC 2007.01
5010-10002	4 g MgSO ₄ , 1 g NaCl, 1 g Trisodium Citrate, 0.5 g Disodium citrate with 50 mL Centrifuge Tube	Tube & packet	50/pk	EN 15562
5010-10003	4 g MgSO ₄ , 1 g NaCl, 1 g Trisodium Citrate, 0.5 g Disodium citrate	packet	50/pk	EN 15562

dSPE Kit
